

# Dental phones with a smile

**THINK**  
healthcare

## High ROI

Automate 50% of calls, reduce admin pressure, and capture every lead – maximising private revenue and ROI.

## Simple success

With a simple 1 app design & simplicity of management at its heart, digital transformation has never been easier!

## Patient Focused

Tailored call flows and self-serve options help patients get what they need, without waiting on hold.

## What is it?

Next-gen telephony built for the modern **dental practice** – Ai-ready, integrated, and patient-focused.

This isn't just a phone system – it's a simpler, smarter way to manage patient calls, bookings, and communication.

Designed for busy dental practices, it adapts to your setup, improves access, reduces admin, and helps unlock revenue. Built for where you are – and where you're going.

# Advanced dental telephony

## Key challenges & solutions

Powered by **focus** group

01

### **Missed calls = missed revenue**

We ensure every call is answered or followed up with smart routing and callback tools. No need to worry about rushing patients... we've got you covered!

02

### **Multi-site working isn't always easy**

Whether you just need to work with a couple of local sites, or a nationwide chain our system makes it easy! Group wide reporting, configuration, or local autonomy.

03

### **Long hold times frustrate patients**

Dynamic menus and self-service options keep queues moving and reduce pressure on staff. Patient recognition gives the right message to each patient group

04

### **Losing new or private patients**

If calls go unanswered, new or private patients may book elsewhere. We capture every enquiry — so you don't miss high-value treatments like whitening, implants, or Invisalign.

05

### **Disconnected systems slow staff down**

Our system integrates with major dental PMS platforms to streamline patient interactions, reduce admin time, and improve accuracy.

06

### **No visibility into call demand**

See when calls are busiest, which ones get missed, and how your team responds. Clear insights help you plan staffing and setup to better support patients-and protect revenue.
