

EoFTTP

The next step in business connectivity

Enterprise-grade performance.
Fibre-backed reliability.
Ethernet you can count on.

EoFTTP (Ethernet over FTTP) combines the high bandwidth and low latency of fibre-to-the-premises infrastructure with the reliability and enhanced support of business-grade Ethernet. It's the perfect solution for businesses that need uncontended bandwidth and reliable performance without the hefty price tag of traditional Ethernet services.

Why choose EoFTTP?

EoFTTP is ideal for businesses looking to upgrade from standard broadband to a more robust and reliable connectivity solution.

It offers:

Cost-effective

Lower entry costs compared to traditional Ethernet Leased Line services, making enterprise-grade connectivity accessible to SMEs.

Guaranteed performance

Uncontended, symmetrical bandwidth up to 400Mbps guaranteed, with additional burstable bandwidth available

Enhanced security

An isolated transmission path ensures your connection is separate from shared networks, safeguarding sensitive business data

24/7 support

Business-grade support with round-the-clock assistance and 8-hour resolution SLAs to minimise downtime.

Proactive monitoring

With a managed router, your circuit is monitored 24/7 for service-affecting issues before they impact your business.

Quick installation

Faster setup compared to traditional Ethernet services, with no need for a separate phone line.

Who is it for?

- Growing SMEs upgrading from broadband
- Businesses needing secure, high-speed data transfer
- Organisations using delay-sensitive apps like VoIP, video conferencing, and cloud platforms

Powering connectivity

- **Healthcare** – Secure transmission of medical data and telemedicine services
- **Finance & Retail** – Fast, secure transactions and always-on connectivity
- **Education** – Reliable connections for e-learning and virtual classrooms
- **Corporates** – Unified Communications and cloud-first operations

EoFTTP delivers the performance and enhanced support your business demands.

Whether you're upgrading from standard broadband or need a robust connectivity solution for business-critical applications,

Service specifications

Support

24/7/365 proactive support
(with managed router)

Service level agreement

8-hour resolution time

Contract terms

12, 36 or 60 month options available

Installation lead time

30 working days

IP addresses

Range of options available

VLANs

Multiple services/VLANs available to prioritise business critical applications

Speeds:

Symmetrical, uncontended up to 400Mbps
MGS, with burst capacity available

Bandwidth options

1Gb/115Mb

(*Minimum Guaranteed Speed: 100Mb)

1Gb/220Mb

(*Minimum Guaranteed Speed: 200Mb)

**2Gb/2Gb

(*Minimum Guaranteed Speed: 100Mb)

**8Gb/8Gb

(*Minimum Guaranteed Speed: 400Mb)

* Minimum guaranteed speed: The figure shown is an uncontended, symmetrical speed that the circuit can run at, the remaining bandwidth is contended, so speeds may reduce during busy periods.

** 2Gb and 8Gb services have limited availability. Focus can check your address to confirm the service that can be provided.

Ready to Upgrade Your Connectivity?

Experience the perfect balance of performance, reliability, and value with EoFTTP.
