Breach alerts

24/7 dark web monitoring

Monthly reports

Reduce cyber risk

Organizational Compromises

✓ **Password reuse is common** – even senior staff often reuse the same details across accounts, leaving businesses exposed when a single login is compromised.

✓ **Phishing attacks are evolving** – AI-driven emails are more convincing than ever, making it harder for employees to spot fraud.

✓ **Third-party breaches expose your data** – even if your systems are secure, credentials from external platforms can leak onto the dark web.

✓ **Insurers expect more** – cyber insurance now requires proof of proactive monitoring and ongoing protection, not just one-off checks.

✓ **Exposure is often invisible** – without monitoring, stolen details can sit undetected for months before being exploited.

Dark Web Monitoring addresses these challenges by continuously scanning for exposed credentials, providing real-time alerts, and delivering actionable reporting to keep your business safe.

Credential theft:
the new frontline of cybercrime

Stolen credentials are now the most common way attackers gain access to businesses. With billions of usernames and passwords already circulating on the dark web, cybercriminals don't need to break in - they just log in.

Why it matters now

24.6
billion sets of usernames and passwords are already circulating on the dark web

43%
of UK businesses reported a cyber-attack in the past 12 months

Phishing volumes have risen by more than
1200%
since the rise of AI-powered attacks

Businesses with continuous monitoring achieve
85%
of users admit to reusing passwords across accounts

Recovering from identity theft takes
100-200
hours per incident

Cyber Intelligence: now included as standard

**Every Focus Group customer receives Dark Web Monitoring as part of their service.**

Baseline features:

- ✅ **Always-on monitoring** – continuously scans the dark web for exposed credentials linked to your business so you **never risk being caught unaware.**

- ✅ **Real-time breach alerts** – instant notifications if your data is discovered, allowing your team to **reset access and contain risk before criminals exploit it.**

- ✅ **Monthly reporting** – provides clear, actionable summaries of exposures and trends, helping you **track your security posture and prove compliance over time.**

- ✅ **Breach detail visibility** – identifies exactly what information was found, where it appeared, and who it impacts, so you can **prioritise the right actions quickly.**

- ✅ **Self-service portal** – gives you direct access to search, review, and export results, offering **transparency and control without requiring specialist knowledge.**

Dark Web Monitoring provides every Focus Group customer with a foundation of cyber intelligence. It delivers essential outcomes: **stronger protection, faster response, compliance evidence, and peace of mind.**

Focus on what comes next

✅ **1. Assessment:** your domain is scanned to detect existing exposures.

✅ **2. Report:** you receive a clear summary of findings and risks.

✅ **3. Protection:** continuous monitoring, alerts, and reporting are applied and maintained.

✅ **4. Upgrade options:** add Executive or Supply Chain Monitoring when you need extended protection.
Your choices with Cyber Intelligence
Upgrade your protection

✅ **Protect your leadership team**
Executive Monitoring extends cover to senior staff email accounts, which are prime targets for attackers due to their access and authority. By adding visibility and alerts for executives, you reduce the risk of spear-phishing, account takeovers, and reputational damage at the very top of your business.

✅ **Safeguard your supply chain**
Supply Chain Monitoring scans for compromised credentials across your partners and suppliers. With attackers increasingly exploiting third-party weaknesses to infiltrate larger targets, this feature gives you early warning of risks outside your immediate control, strengthening resilience across your ecosystem.

✅ **Go deeper with enhanced cyber intelligence**
for organisations with higher risk profiles or regulated environments, an advanced package combines extended reporting, proactive improvements, and wider monitoring. This provides a more detailed picture of credential threats, making it easier to demonstrate compliance, satisfy insurers, and assure customers.

Switch off your protection
Cyber Intelligence is included as standard because credential theft is today's most common attack vector. You may choose to remove it, but doing so means your business will lose continuous monitoring, breach alerts, and credential reporting. This leaves your organisation exposed to theft, phishing, and reputational harm which, may affect compliance or insurance obligations.

Cyber Intelligence is built in to help every business stay resilient, compliant, and trusted. Whether you're an SME or an enterprise, it provides the visibility you need to stop attackers using stolen credentials against you — and the flexibility to scale protection when you need it most.
